

Combined Cycle Power Plant Antalya (1,150 MW) Antalya –Turkey

Order Description: Process & Control Commissioning

Client: Siemens

Volume: 60,000 Euro

Period: 2011

- Scope of Work:**
- › Water/Steam cycle process analyses of HRSG 21 and HRSG 22 with associated Balance-of-Plant equipment during steam blow out.
 - › Ensure the steam blow out is carried out satisfactorily as per owner consultant's procedures and recommend solutions as when issues arise.
 - › Ensure all DCS logic functionality are operational as per functional descriptions and recommend solutions to defects and/or improvements.
 - › Working closely with owner management and engineers during commission to meet project contractual targets, specifications and requirements.
